About us:

Brinkhaus GmbH is specialized in the customized production of standardized solutions for customers. We focus on solutions in the area of data acquisition from production systems and their further processing. For this purpose, we develop edge components as well as user interfaces in Siemens controls, write core software for tool monitoring systems or code special apps for Mindsphere.

Our role in EuProGigant:

In EuProGigant, we provide the platform for acquiring data and running services locally with the edges. Particular attention is paid to ensuring that users retain sovereignty over their data and that data access by Gaia-X services is provided with appropriate rights management. The core of the devices is provided as an open source solution.

We participate in these
thematic working groups:

CO2 footprint

Validation platform

Mobile processing machines

Component matching

Why EuProGigant is important to us:

EuProGigant enables us to engage with edge technologies and Gaia-X in the long term. Thanks to the project, we can align ourselves strategically with Gaia-X and at the same time use developed technologies for other areas. The project will enable us to strengthen our technological base in the edge area in the long term. Some of the technologies developed will be used in customer projects.
