central@eitmanufacturing.euwww.eitmanufacturing.eu**About us:**

EIT Manufacturing Central is one of six innovation hubs of EIT Manufacturing, a Knowledge and Innovation Community of the European Institute of Innovation & Technology (EIT), an EU institution. It connects innovation creators, research institutes and companies from and for the manufacturing industry across Europe. Driven by a strong interdisciplinary community, EIT Manufacturing creates unique added value for European products, processes, services and supports globally competitive and sustainable manufacturing. The EIT Manufacturing network is composed of members from across Europe. The EIT Manufacturing Central region includes Germany, Belgium, the Netherlands, Luxembourg, Ireland and Poland.

Our role in EuProGigant:

With the working package nine, EIT Manufacturing is responsible for the communication and dissemination of project results and thus also for increasing the level of awareness of EuProGigant. The team positions the project partners as experts and the first point of contact for questions regarding the implementation and use of Gaia-X in the production environment. EIT Manufacturing achieves this by focusing on the importance of the project for the European manufacturing industry - e.g. by disseminating the project results and project partial results, especially with reference to the use cases and project-related guidelines. In addition, the team supports the planning, participation and promotion of project internal and external events.

**We participate in these
thematic working groups:****CO2 footprint****Validation platform****Mobile processing machines****Component matching****Why EuProGigant is important to us:**

EuProGigant addresses the transformation and challenges of Industry 4.0, which also concern the EIT Manufacturing community. With its industry-related use cases, the project not only addresses these challenges, it also provides small and medium-sized enterprises in particular with important insights into digitization, the importance of their data, and future data-driven business models. As the only European network for the manufacturing industry, EIT Manufacturing can not only communicate the project results, but also implement them efficiently across Europe.
